

CIBAK: non-rotating clamp for the COMBITUBE system*

The CIBAK non-rotating clamp has been improved. New is the square front, meaning that it can now tightly hold small parts more precisely and finely. It is also equipped with plastic platelets at the front. Delicate objects are thus better protected. The plastic platelets can easily be replaced if necessary.

CIBAK: non-rotating clamp

Clamp with non-rotating bolt connection, suited for CIBAE articulated arm, for CIBAL extension, for CIBAP adapter and for the former Graf system.

Tech. data of CIBAK

- Length 11 cm
- Weight 70 g

Left holder: CIBAF plate with COMBITUBE 20 cm COARO AS and COGEA articulated connection, together with CIBAP adapter, CIBAL extension and CIBAK clamp

Right holder: CIBAU articulated arm set

CIBAU, set with CIBAE articulated arm, CIBAK clamp and CIBAF base plate

CIBAP, top bolt connection, bottom COMBITUBE female cone*

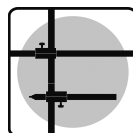

CIBAE, articulated arm

CIBAL, extension
