

COSRO: small folding tripod for the COMBITUBE system*

The diversely useful and modular COMBITUBE system*, a system for holding and fastening lamps, backgrounds, brighteners, the object to be recorded etc., is supplemented with another element:

COSRO: small folding tripod, ...

... handy when collapsed, ...

... light and yet robust.

In addition to a large variety of fittings, there are already several bases for the COMBITUBE system*:

- Plate supports
- Collapsible tripods
- Dollies

However, most of them are rather heavy (as of 0.8 kg, 1.76 lbs) and / or large. With the small COSRO folding tripod in aluminium, the need for a small, light, and yet stable base is addressed. It is especially appreciated for use at locations.

Tech. data of COSRO

- | | |
|--|------------------|
| - Length when collapsed | 34 cm (13.4") |
| - Height when extended, cone not incl. | 11 cm (4.3") |
| - Weight | 460 g (1.01 lbs) |

Various applications ...

... as stand for COMBITUBE* assemblies, ...

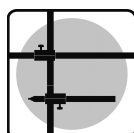

... as a low position for lamps (with RODEE adapter), ...

... as a tripod with telescope (STAPI) for small lamps etc.
